THULANJANA PRAMOD

Software Engineer | Frontend Developer

A: Lisbon, Portugal **P:** (+351) 965 617 062 **E:** thulanjana1125@gmail.com **L:** www.linkedin.com/in/thulanjana/

SUMMARY:

Frontend-focused Software Engineer with 4 years of experience building high-performance, scalable web applications across telecom, fintech, data governance, and charity sectors. Specialising in React (v15–19) and TypeScript architectures, with solid full-stack experience in Node.js, Python, and PHP. Proven track record of delivering production-grade solutions for international clients and enterprise platforms, including Siemens Energy. Focused on frontend performance optimisation, clean architecture, automated testing (Jest, RTL), and seamless REST and GraphQL API integration. Holds a First Class Honours degree in Software Engineering.

TECHNICAL ECOSYSTEM:

Frontend Architecture & UI	React (v15–19), TypeScript, Next.js, TailwindCSS, Radix UI, Material UI, State Management (Redux, Zustand), TanStack (Query, Table), Vite, Angular 12, RxJS, SASS, SCSS, HTML5, Bootstrap, Webpack, Gulp
Backend Services & APIs	Node.js, Express.js, Python (FastAPI, Django, Flask), PHP 8 (Laravel, WordPress), REST APIs, GraphQL, XML, YANG Data Modelling, Celery, SQLAlchemy, Microservices Architecture
Databases & Streaming	PostgreSQL, SQL, MongoDB, Redis, Elasticsearch, Kafka, Avro, AWS SQS
Cloud, DevOps & Infrastructure	AWS (Lambda, S3, SQS, ECR, IAM), GCP (Cloud Run, GKE, BigQuery), Docker, Kubernetes, Git, CI/CD (Jenkins, Bitbucket Pipelines), Terraform, ArgoCD
AI & Data Engineering	AI-driven integration(Anthropic/Claude, OpenAI), LLM Integration, Model Context Protocol (MCP), Observability(Datadog), pandas
Testing & Quality Assurance	Jest, React Testing Library, Vitest, Supertest, pytest, Test-Driven Development (TDD), BDD Feature Specs, Integration Testing
Architecture & Core Practices	Frontend Performance Optimisation, Clean Architecture, Design System Engineering, Async/Await Concurrency, Repository Service Pattern, OIDC and JWT Auth, Agile (Scrum)

PROFESSIONAL EXPERIENCE:

Software Engineer *Sep 2025 - Present*

OPPLANE (Portugal)

- **Scalable Applications:** Built high-performance React, Next.js and Python (Django, FastAPI) applications on AWS and GCP for telecom, fintech, and data governance clients.
- **LLM Evaluation Platform:** Designed and extracted JudgeKit, a domain-agnostic Python library using Bayesian IRT models (PyMC) to calibrate multi-LLM quality scores across large datasets.
- **API Integration:** Built and integrated REST, GraphQL, and MCP endpoints, including a combined FastAPI and stateless MCP agent service to unify frontend, microservice, and AI workflows.
- **Distributed Batch Processing:** Built asynchronous, resumable batch jobs on Cloud Run, BigQuery, and GCS, isolating scientific dependencies into dedicated container images.
- **Reusable Libraries:** Authored a framework-agnostic SQLAlchemy and Django audit trail library that logs data changes at the session flush layer.

- **Quality Assurance & Observability:** Maintained 300+ automated tests using pytest, Jest, and React Testing Library while integrating Datadog for system observability and automated error alerting.
- **CI/CD & Cloud Infrastructure:** Built Bitbucket Pipelines to automate version-gated releases, publish Artefact Registry container images, and sync runtime config to GCS.
- **Agile Collaboration:** Led code reviews, sprint planning, and architecture documentation in Scrum teams alongside UI/UX and backend engineers.

Web Developer *Dec 2023 - Sep 2025*

FAT BEEHIVE (UK)

- **Enterprise FE Solutions:** Engineered high-performance, responsive React web applications for enterprise clients, including Siemens Energy, and created extensible frontend frameworks for 30+ leading UK platforms.
- **Full-Stack & API Architecture:** Built and integrated robust Node.js, Express REST APIs and customised PHP, WordPress backends, seamlessly connecting frontend components with server-side logic using Test-Driven Development (TDD).
- **Testing & Quality:** Spearheaded unit and integration testing using Jest, React Testing Library, and Supertest, accelerating deployment pipelines and improving code reliability.
- **Performance & SEO:** Optimised Core Web Vitals, responsiveness, and load times using modern JavaScript, CSS, SASS, and asset bundling strategies.
- **Data Processing & Integration:** Researched and optimised data processing workflows to enable efficient information extraction and retrieval across complex web platforms.

Junior Web Developer *Aug 2023 - Dec 2023*

FAT BEEHIVE (UK)

- **UI Refinement:** Refined existing web applications with UI enhancements, performance upgrades, and error resolutions across top UK charity platforms.
- **Full-Stack Feature Delivery:** Leveraged PHP, TypeScript, and SQL to develop custom functionality aligned with business objectives and user needs.
- **System Optimisation:** Diagnosed and resolved complex processing issues on UNIX and Windows environments, reducing system downtime and boosting platform efficiency.

Application Support Engineer *Aug 2021 - Jul 2023*

IIHRM (Sri Lanka)

- **Application Maintenance:** Developed and maintained dynamic frontend interfaces and backend services using React, PHP (Laravel), and MySQL for enterprise online assessment tools.
- **System Triage & Support:** Provided end-to-end technical support across FE and BE components, documenting ticket-triage processes to streamline issue resolution and maximise system reliability.
- **Data Handling Optimisation:** Researched, troubleshot, and optimised backend database queries and services for high-volume data processing.

EDUCATION:

BSc (Hons) Software Engineering First Class Honours *2020 - 2023*

University of Wolverhampton, UK
